- The toolbox activities are varied and rich, they transcend the use of memory, facilitate understanding and reasoning, making content something active and efficient

Feedback and suggestions to make the tool more versatile

9 answers

- Thank you for this training. For me it was very interesting and I learned so much. It has been a nice present for me!
- Make the instructions and steps on an easy way. Not to much text on it
- On few answers, I'm on the middle between Disagree agree and Strongly agree
- I need more time of using it for giving a proper evaluation. Now it is positive
- I think it is really clear and useful
- Add meaningful images. Concise instructions, not too long. Use simple language

- I think the activities are also universal, which is a good think, because they are easily applicable. I think the overall structure need to take into consideration the language skills of the group (how well they know each other and other factors). Also to make sure the exercises are not and too heavy participants have enough energy (balance between deep and light exercises)
- I think it's very important all tools include tips for facilitators on giving feedback, work with the group, methodological and coaching point of view. I know it's there just wanted to emphasize its importance
- Activities should be short to be allowed on the job trainings
